

OFFECCT

PRODUCT INFORMATION

The acoustic pane Jasminel is designed by Offecct's new designer Layla Mehdi Pour and is inspired by nature's interplay between order and irregularity. The panel is shaped like a triangle and can be combined into various playful solutions.

When Layla Mehdi Pour designed Jasmine, she was inspired by natural elements that may seem irregular in their macro form, but in the details have a wonderful precision and regular structure. In this case, she started foremost from flowers and developed them into a concrete product with a playful character.

Solutions for creating good, sustainable sound environments in public spaces are becoming increasingly important. Jasmine's connection to the living, natural environment can be seen as a response to the growing need to reduce noise and restore calm in, for example, offices, restaurants and other meeting places.

TECHNICAL INFORMATION

Jasmine works well to increase speech intelligibility in rooms when used as a complement to an acoustic ceiling. They complement the ceiling well in the frequencies where the need for absorption usually lies.
